

artdaq Demo - Support #9061

Make Darwin builds of artdaq

06/05/2015 10:20 AM - Eric Flumerfelt

Status:	Rejected	Start date:	06/05/2015

Description			
The <i>art</i> group currently builds and supports <i>art</i> on the Darwin (Mac OSX) platform. For the purposes of the artdaq-demo, it may be desirable to provide a Darwin build of <i>artdaq</i> . However, Mac OSX is not an appropriate platform for a production DAQ system, and we would have to take precautions (warning messages in scripts?) to make sure that users do not try.			

History

#1 - 05/04/2016 04:20 PM - Eric Flumerfelt

- Target version set to 981

#2 - 01/13/2017 03:15 PM - Eric Flumerfelt

- Category set to Under Consideration

- Target version deleted (981)

Related to [#11007](#). We should wait on this at least until the *art* group gives clear guidance about their desired build environments on late-model versions of OSX.

#3 - 05/22/2017 09:10 AM - Eric Flumerfelt

- Status changed from New to Rejected

With the use of epoll in some of the new RoutingMaster code, Darwin cannot be a supported platform for *artdaq*.
